PROFESSIONALS

A team that can make the difference

People are the heart of Tecnografica. Our team of highly qualified and passionate designers allows us to develop projects with speed and flexibility, always ensuring the highest level of creativity and attention to detail. The quality of service and design are for us a top priority: our goal, in fact, is to accompany the customer at every stage of the project, offering tailor-made solutions and continuous support.

Thanks to the use of high-performance scanners and cameras, we work on the highest quality basis, essential to ensure flawless print results. Every detail is taken care of with precision, because we know that the visual quality is fundamental to enhance each project.

With decades of experience, Tecnografica is a reference point for design studios and architects, with a constant commitment to the search for new innovative solutions.

Through the brand “Italian Wallcoverings”, we are specialized in the digital printing of high quality wallpaper and the production of large format decorative panels.

Beyond Design, since 1992

Our history in the world of coatings begins in 1992. The basic idea that guides us from the beginning is to offer products of excellent quality, shaped by the most up-to-date design and technology. What has always characterized us is the ability to go beyond, to push ourselves further, to search for new aesthetic solutions, able to surprise and be industrially realized. We never took the easy way. Sometimes we pursued impossible dreams, as in an eternal challenge between fantasy and reality. The commitment and passion that drive and support us have always left something that has served to realize other projects capable of amazing. Over the years, Tecnografica has become a world leader in the field of design for the ceramic industry, drawing on its deep experience and recognized graphic expertise to create Tecnografica Italian Wallcoverings, the brand that creates and manufactures the Wallpaper lines, Ultralight slabs and Decorative Panels.

WALLPAPER

Tecnografica Italian Wallcoverings wallpaper is based on **modern graphics, craftsmanship and technology of the highest level**. In addition, it is an ecological wallpaper made with selected materials and designed to harmonize with all the furniture and surfaces already present in your environments. Our design wallpapers give life to collections that play on inspirations, atmospheres and different subjects, for interiors with a **strong scenographic and creative impact**. **The result is an incredible artistic-decorative effect for all interiors.**

High-end craftsmanship,
modern technology and
Italian design

FABRIC

The distinctive feature of the Fabric wallpaper is its textured surface with a fabric effect. Fabric is part of Tecnografica's most technical wallpapers, designed to reproduce vivid and brilliant colors with ultra-fine details. The high-quality graphic rendering is further enhanced by the exclusive SD digital acquisition technology, ensuring optimal image processing and high-definition printing.

TNT

The TNT wallpaper stands out for its textured surface with a spatula effect. Like Fabric, TNT belongs to Tecnografica's most technical wallpapers, allowing for the reproduction of vibrant colors, brilliant tones, and extremely fine details. The SD digital acquisition technology guarantees optimal image processing and high-definition printing, delivering exceptional visual quality.

ECO (PVC FREE)

ECO is a cellulose fiber-based support that is completely free of PVC, chemical solvents and vinyl glues. It is an ecological, certified and embossed finish with a natural fiber effect. As with other finishes, even on ECO the image quality is very high and the colors are bright.

This is the right support for those who want to decorate their home, while keeping an eye on the environment.

H2O

H2O is a special fiberglass wallpaper designed for decorating bathrooms, shower interiors, and high-humidity environments. Thanks to SD digital acquisition technology, used for both graphic processing and high-definition printing, this wallpaper offers outstanding color rendering, ensuring durability even in wet conditions.

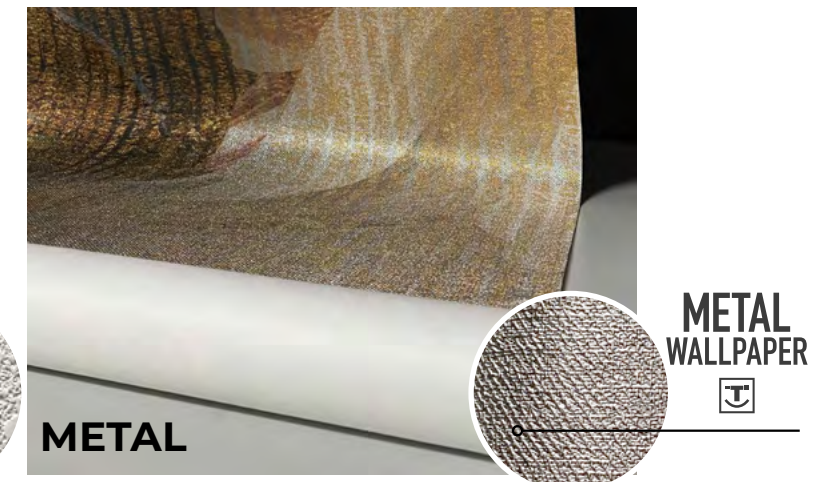

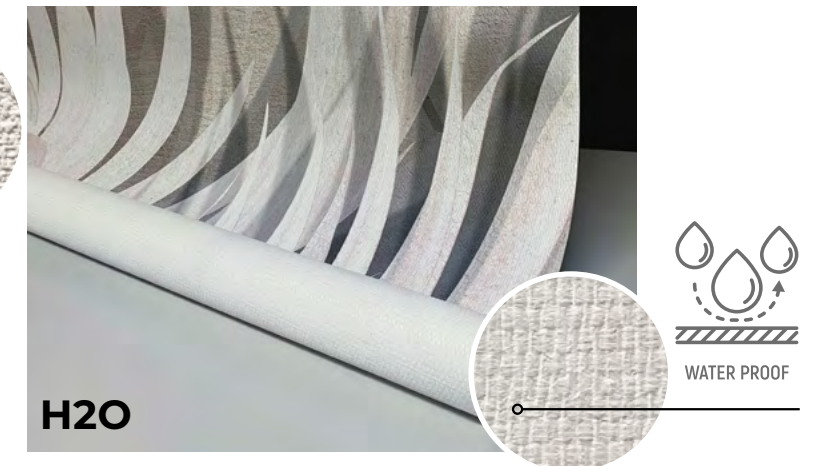

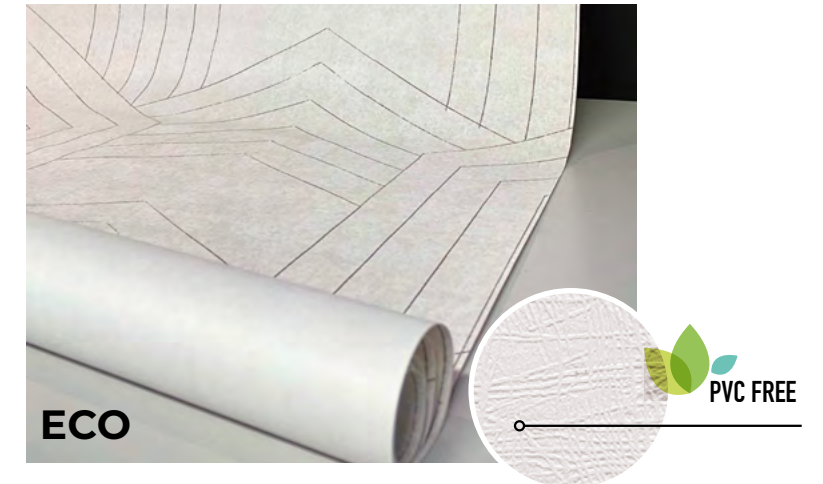

METAL

Metal is a vinyl wallpaper with a metallic effect. Its entire surface is coated with a silver foil, which creates stunning iridescent reflections when exposed to light. This wallpaper enhances metallic colors such as gold, silver, and copper, while making bright and saturated colors appear even more vivid. Additionally, the fabric-effect embossing gives this finish an elegant and sophisticated look, making it suitable for both residential and commercial spaces.

Tecnografica also offers Metal Plus, an advanced version of Metal, which combines matte and metallic areas to create an even more refined and sophisticated effect.

ULTRALIGHT SLABS

[WALLPAPERS](#)[DECORATIVE PANELS](#)[PROFESSIONALS](#)[ABOUT US](#)[BLOG](#)[SHOP](#)

Ultralight is the **ultra-thin aluminium slab** capable of transforming the world of coatings thanks to its incomparable lightness, easy transport, and quick and simple installation. Thanks to the high resolution printing technologies, it also guarantees a **superior graphic quality** and offers **endless possibilities for customizing the design**.

3D relief effects, matte and glossy surfaces, made with an innovative digital cold printing on ultra-light aluminum slabs: the result is a unique product, where the graphic and artistic experience of Tecnografica combines with a product design that introduces new possibilities in the sector. In addition to aesthetics, these slabs have a **real impact on costs and efficiency on the construction site: light, resistant, easy to install and transport**. They are ideal for overcoming the problems associated with the most fragile and heavy materials.

ULTRALIGHT 3D

Ultralight 3D is a decorative panel with a three-dimensional surface that, thanks to an innovative high-resolution printing process, seamlessly integrates three-dimensionality with graphics. Its extremely wide color gamut covers the entire RGB spectrum, ensuring vibrant colors and sharp details. Ultralight 3D is particularly suitable for reproducing surfaces enhanced by structural details, offering a pleasant tactile sensation. This material is ideal for mimicking realistic textures such as concrete, wood, natural stone, and fabrics, making it perfect for a wide range of applications in interior design and decorative element production.

ULTRALIGHT MATTE

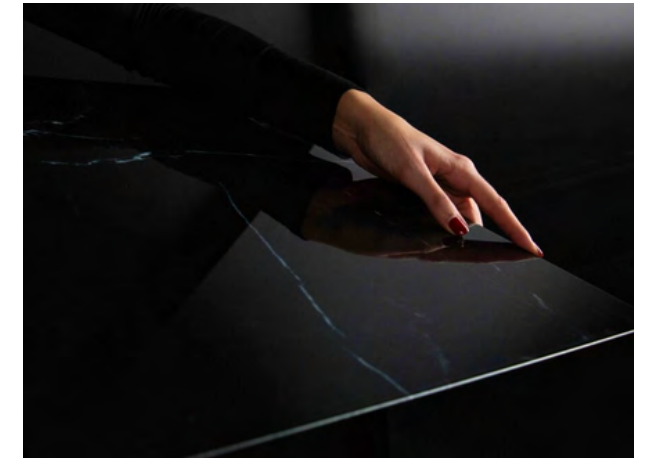

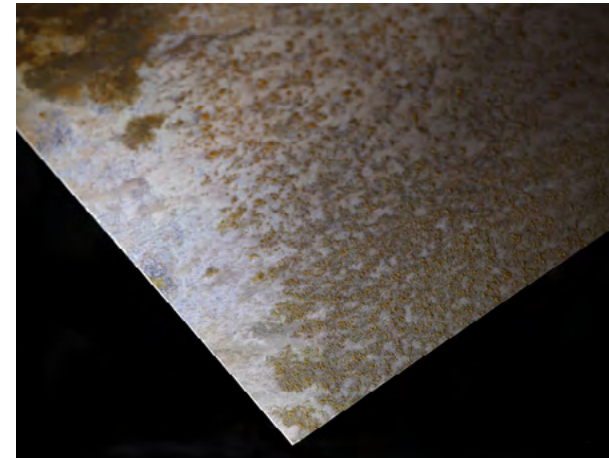

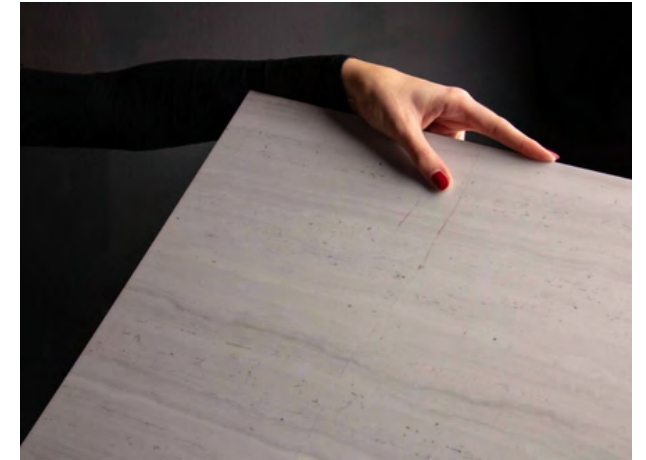

The Ultralight Matte decorative panels in laminated glass feature a satin matte finish, emulating the tactile elegance of marbles and smooth stones, starting from high-resolution scans of natural material slabs. This product benefits from high-quality printing, utilizing the wide RGB spectrum to ensure exceptional detail sharpness, characteristic of a material of this class. As with other finishes, all Tecnografica Italian Wallcoverings designs can be reproduced on Ultralight Matte, offering an extensive range of creative options.

ULTRALIGHT SUPER GLOSSY

Ultralight Super Glossy is a mirror-like glossy finish that masterfully reproduces the elegance of polished marble, onyx, glass, and precious stones, enhancing their colors and emphasizing their brightness and refinement. This finish delivers rich color gradients and intricate details, making Ultralight Super Glossy particularly suitable for luxurious and sophisticated spaces. It is ideal for the naval and Horeca sectors, as well as for bathrooms, wellness areas, and counters. Thanks to the lightweight and easy-to-handle panels, installation can be carried out without the need for extensive preparatory work or masonry, significantly simplifying the renovation process.

Tecnografica Italian Wallcoverings decorative panels represent an innovative reality in the world of wall decorations.

The construction system used consists of sets of **large-format panels (up to 148x300 cm)**.

The latest generation of graphic detection and printing technology makes it possible to have decorative panels for walls characterized by an **unprecedented graphic quality**, both in terms of visual impact (realistic stone or mineral effect panels, such as marble, agate, onyx and many others), both the media used (including backlit and glossy panels).

Based on the different finishes proposed, this coating system is divided into: Dècora Glass, Dècora Glass Backlit and Dècora LED. The flexibility of the Italian Wallcoverings offer also lies in the size of the decorative panels, which can be totally customized according to the needs related to the individual project.

DÈCORA GLASS

Dècora Glass is the exclusive Tecnografica decorative panel in laminated glass. Thanks to their large dimensions (up to 148x300 cm) and reduced thickness (8.7 mm), Dècora Glass slabs are suitable for coating large surfaces and also for the implementation of large projects in the marine and Horeca sectors, as well as at residential and commercial level. The strength of the glass also allows these panels to be used as kitchen tops or support surfaces on tables and furniture. And for environments that require an even more spectacular impact, Dècora Glass has a double function: from a classic decorative panel applied to the wall, it can also become a backlit panel.

DÈCORA GLASS BACKLIT

Dècora Glass decorative laminated glass panels are also available in the “Backlit” version, equipped with an integrated LED lighting system. Dècora Glass Backlit can be easily installed on the construction site through elegant snap profiles. Thanks to their large dimensions (up to 148x300 cm nominal) and the reduced total thickness of the glass plate, combined with the light structure (21.7 mm), Dècora Glass Backlit panels lend themselves to the coating of large surfaces.

Within the maximum dimensions, you can get custom measurements for original compositions.

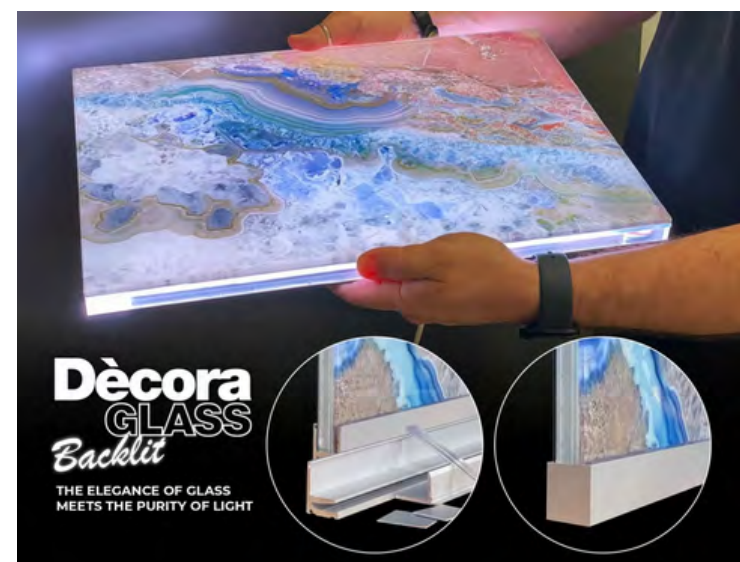

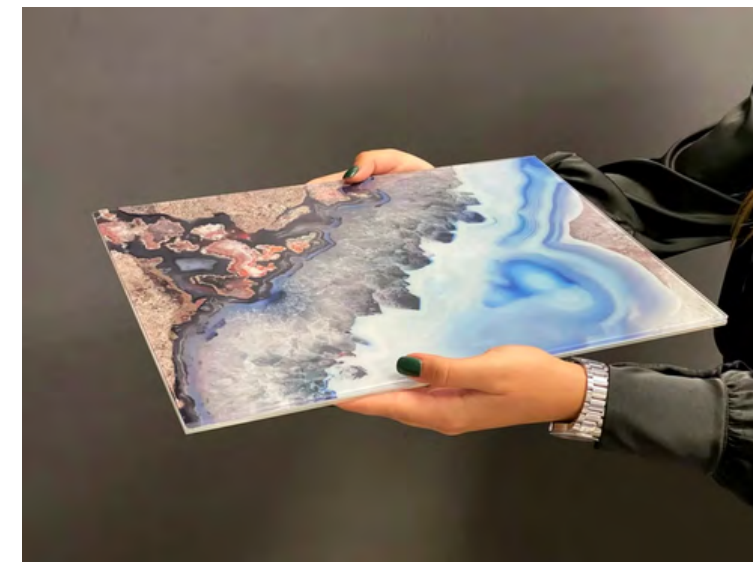

The result of a research that expresses the synthesis between art and technology, Dècora Glass Backlit offers the possibility to create environments with great aesthetic impact with maximum design freedom.

DÈCORA LED

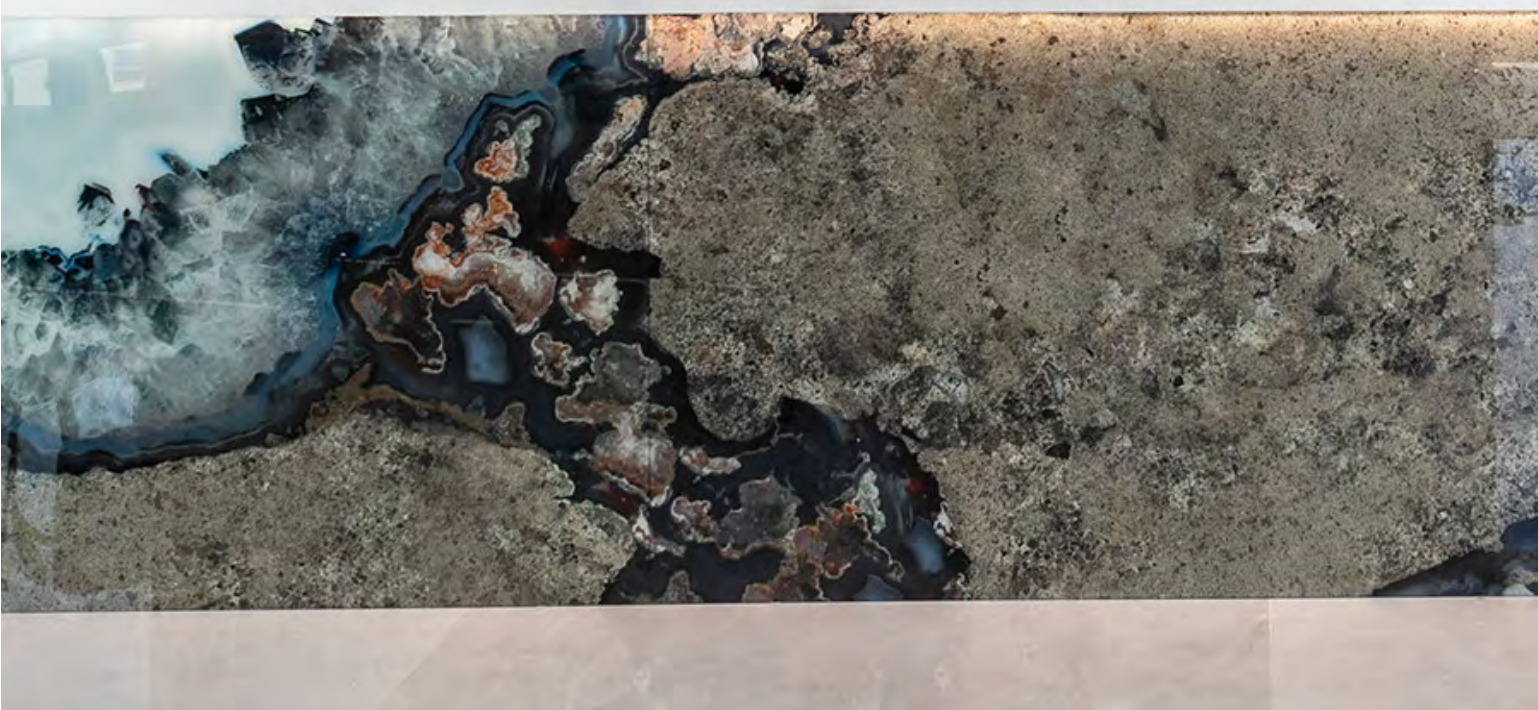

Dècora LED is the decorative panel with integrated lighting that combines decoration with technological LED lighting, able to create unprecedented scenic effects with light games and color variations. The reduced thickness of the panel allows you to choose between wall installation, recessed or through specific profiles, which support it even away from the walls. Fully programmable and controllable via remote control or smartphone app, Dècora LED boasts an optimal light and color output, combined with low energy consumption. The shape of the Dècora LED can be completely customised, while the uniform lighting up to the edges creates continuity between the panels and gives aesthetic completeness to the graphics. The patent filed on the lighting technology used further underlines the innovative and cutting-edge nature of this decorative element.
